

PyCharm Setup / Source Code

Created a Python file named tutorial11.py in PyCharm and use the Selenium WebDriver code provided for the practical. The source-code screenshot can be pasted below.

OUTPUT / SCREENSHOT

```
1 from selenium import webdriver
2 from selenium.webdriver.common.by import By
3 from selenium.webdriver.support.ui import WebDriverWait
4
5 # Open Chrome
6 driver = webdriver.Chrome()
7 driver.maximize_window()
8
9 wait = WebDriverWait(driver, 10)
10
11 try:
12     # 1. Open Blinkit Website
13     driver.get("https://blinkit.com/")
14     print("Website opened successfully")
15
16     # 2. Validate Website Navigation
17     assert driver.title != ""
18     print("Website Navigation: PASS")
19
20     # 3. Product Search
21     search_box = wait.until(
22         lambda d: d.find_element(
23             By.CSS_SELECTOR,
24             "input[placeholder*='Search'], input[placeholder*='search']"
25         )
26     )
27
28     search_box.send_keys("milk")
29     print("Product Search: PASS")
30
31     # 4. Product Page Validation
32     print("Product Selection: PASS")
33
34     # 5. Back and Forward Navigation
35     driver.back()
36     driver.forward()
37     print("Back/Forward Navigation: PASS")
38
39     # 6. Regression Validation
40     assert driver.current_url != ""
41     print("Regression Validation: PASS")
42
43 finally:
44     # Close Browser
45     driver.quit()
46
47 print("Tutorial 11 Completed Successfully")
```

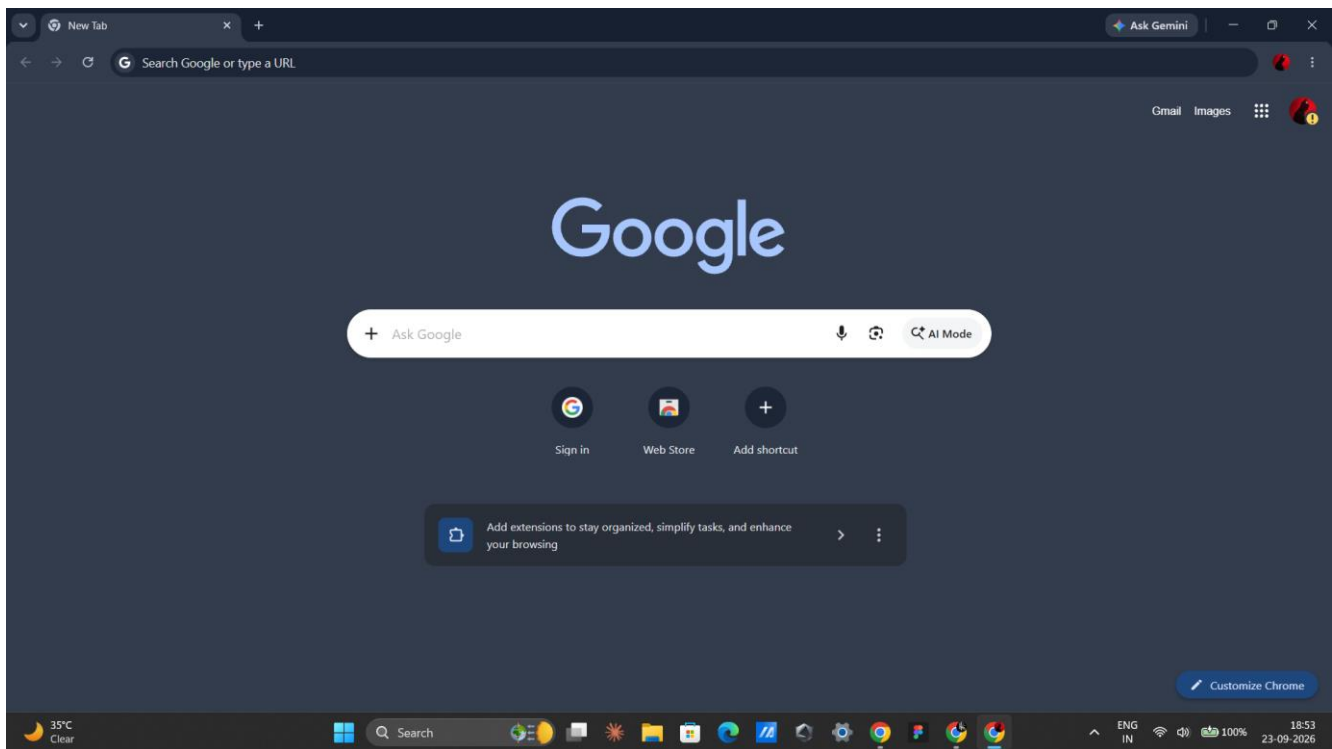

Scenario 1: Open Blinkit Website

Test Steps

1. Open Google Chrome.
2. Run the Selenium Python program from PyCharm.
3. Open the Blinkit Web Application.
4. Verify that the Blinkit home page is displayed.

Scenario 2: Login Interface

Test Steps

1. Open the Blinkit Web Application.
2. Click the Login option.
3. Verify that the login interface is displayed.
4. Close or return from the login interface after verification.

OUTPUT / SCREENSHOT

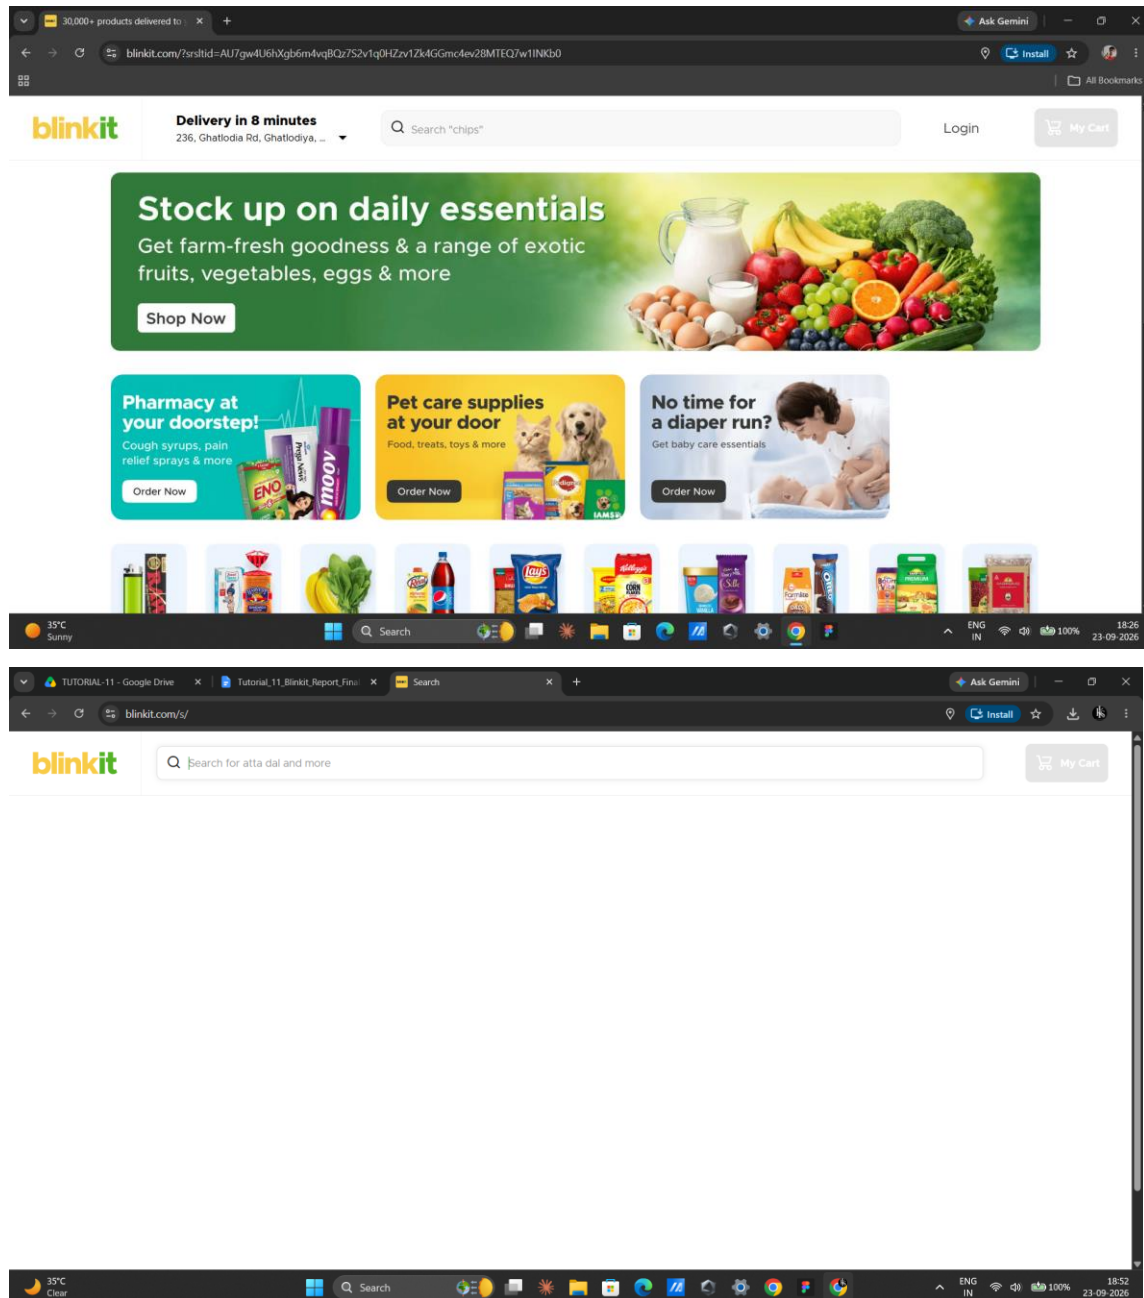

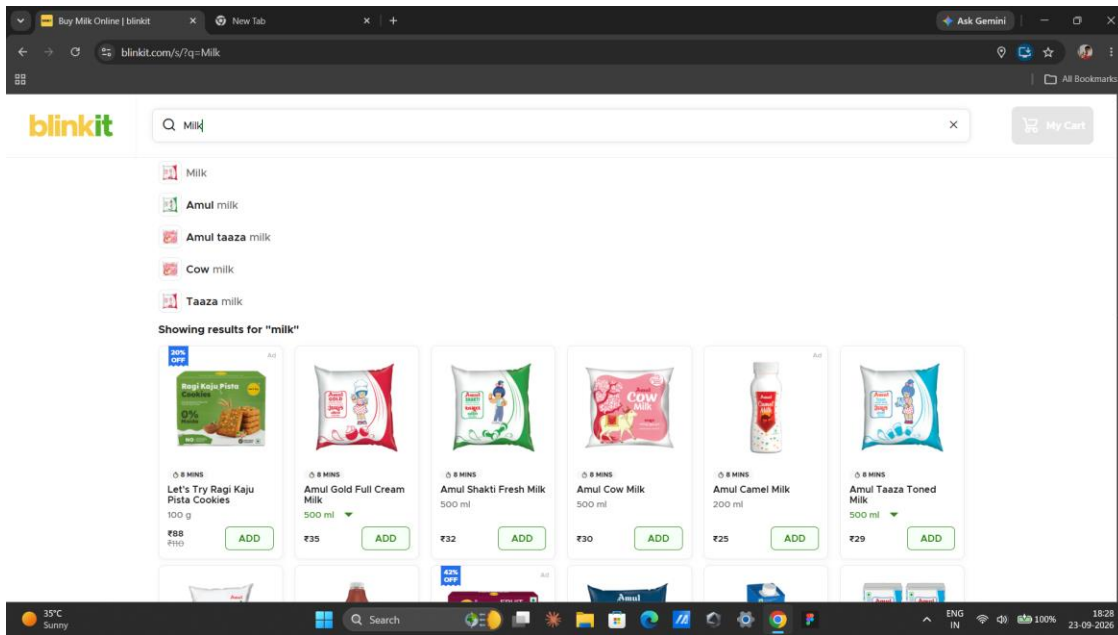

Scenario 3: Product Search

Test Steps

1. Open the Blinkit Web Application.
2. Click the search field.
3. Enter a product name such as Milk.
4. Verify that relevant product results are displayed.

OUTPUT / SCREENSHOT

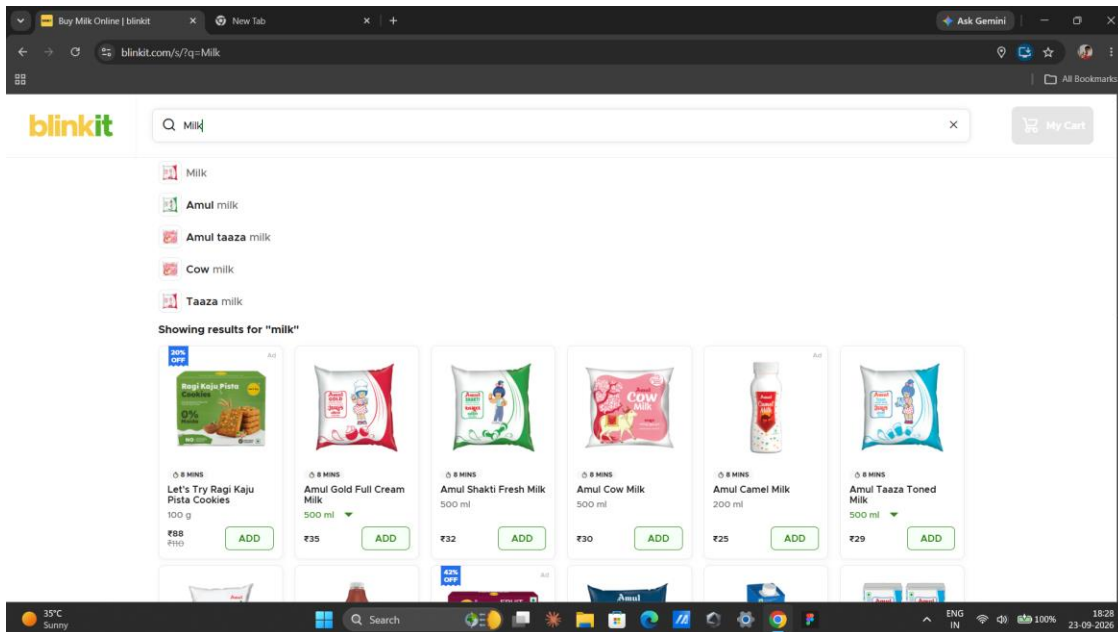

Scenario 4 : Cart Navigation

Test Steps

1. Open the selected product.
2. Use the available cart option.
3. Open the cart.
4. Verify that the cart page or cart interface is displayed.

Conclusion / Outcome

Python Selenium automation testing was performed on the Blinkit Web Application. The website navigation, login interface, product search, product selection, cart navigation, and back/forward regression scenarios were identified for automation testing. The selected test scenarios were prepared according to the practical requirements, and the corresponding output screenshots can be added in the spaces provided.
