

Scenario 1: Open JioMart Website

Test Steps

1. Open Google Chrome.
2. Run the Selenium Python program from PyCharm.
3. Open the JioMart Web Application.
4. Verify that the JioMart home page is displayed.

OUTPUT / SCREENSHOT

Scenario 2: Login Interface

Test Steps

1. Open the JioMart Web Application.
2. Click the Login option.
3. Verify that the login interface is displayed.
4. Capture the login interface.

OUTPUT / SCREENSHOT

Scenario 3: Mobile Number Field

Test Steps

1. Open the login interface.
2. Locate the mobile number input field.
3. Verify that the field is visible and enabled.
4. Capture the mobile number field.

OUTPUT / SCREENSHOT

Scenario 4: Empty Mobile Number Validation

Test Steps

1. Open the login interface.
2. Keep the mobile number field empty.
3. Click Continue or the available proceed button.
4. Verify that the page does not proceed without a valid number or shows validation.

OUTPUT / SCREENSHOT

Scenario 5: Back Navigation

Test Steps

1. Open the JioMart login interface.
2. Use the browser Back option.
3. Verify that the previous page or home page is displayed.

OUTPUT / SCREENSHOT

Conclusion / Outcome

Selenium WebDriver with Python was used to prepare automated test scenarios for the JioMart login module. The scenarios cover website opening, login interface, mobile number field, empty-input validation, and back navigation. Screenshot spaces are provided for practical evidence.
