

Scenario 1: Open Telegram Web

Test Steps

1. Open Google Chrome.
2. Run the Selenium Python program from PyCharm.
3. Open the Telegram Web application.
4. Verify that the Telegram Web page is displayed.

OUTPUT / SCREENSHOT

Scenario 2: Verify Page Title

Test Steps

1. Open the Telegram Web application.
2. Read the browser page title.
3. Verify that the title contains the word Telegram.

4. Capture the page title in the browser.

OUTPUT / SCREENSHOT

Scenario 3: Verify Sign-in Page

Test Steps

1. Open Telegram Web.

2. Wait for the page content to load.
3. Verify that the page body is visible.
4. Capture the sign-in page.

OUTPUT / SCREENSHOT

Scenario 4: Verify Page URL

Test Steps

1. Open Telegram Web.
2. Read the current browser URL.
3. Verify that the URL contains web.telegram.org.
4. Capture the browser address bar.

OUTPUT / SCREENSHOT

Scenario 5: Check Login Interface Content

Test Steps

1. Open Telegram Web.
2. Check that page text or input controls are available.
3. Verify that the page content is not empty.
4. Capture the displayed login interface.

OUTPUT / SCREENSHOT

Conclusion / Outcome

Selenium WebDriver with Python was used to prepare five automated checks for Telegram Web. The scenarios cover page opening, title, sign-in page content, URL, and interface availability. Add screenshots after running the program.
